

## HEBE HAVEN YACHT CLUB 24 HOUR CHARITY DINGHY RACE 2021

### Event Overall Trophy Winner Calculation Method

Refer to NOR 15.5, the Event Overall Trophy Winner will be awarded to the winning team using a combination of the total money raised and the corrected average lap time. Here is the calculation method:

$$\text{Overall corrected average lap time} = \text{Corrected average lap time} \times (1 - \text{donation allowance})$$

The winner will be awarded to the lowest overall corrected average lap time. Donation allowance will be based on actual donation raised and received by 20th October 2021.

Actual donation raised in HKD	Allowance
10,000	2%
15,000	4%
20,000	6%
25,000	8%
30,000	10%
35,000	12%
40,000	14%
45,000	16%
50,000	18%
60,000	20%
70,000	22%
≥ 80,000	25%

Example:

If the corrected average lap time of a team is 600 seconds and she raises HKD 30,000, then she will get the allowance of 10% on her handicap. Thus the overall corrected average lap time will be 540 seconds.

Teams under the corporate sponsorship package will have HKD 25,000 deducted from their total prior to the above calculation.

Issued by Race Committee  
17th September 2021
